# How to Consume Philippine Geoportal Layers in ArcGis
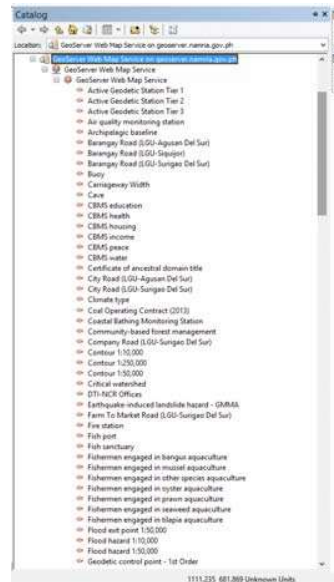

1. In the Catalog window (ArcMap) or Catalog Tree (ArcCatalog), expand the GIS Servers node and double-click **Add WMS Server.**

2. In the following screen enter the url:
   https://geoserver.geoportal.gov.ph/geoserver/ows?service=wms&version=1.1.1&request=GetCapabilities
   and then click **Get Layers**. The list of available layers will be displayed. Click Ok to add the GP web map service.

3. Click the GIS Server connection to expand it. You'll see a series of GIS services in the tree view. Expand the Geoserver web map service on geoserver.geoportal.gov.ph folder.

4. Drag and drop the layer to view in ArcMap.
